## MATSUSHITA ELECTRIC

#### **SPECIFICATIONS**

Power Source: Battery: 9 V (6 "D" size Batteries)

Audio Output: 1.2 W (1.5 W maximum)

Transistors: 2SB 173(1) 2SB 175(4) 2SB 176(1) 2SB 324(2) 2SB 172(1)

Recording System: AC. Bias 35K Cycles

Erasure System: DC. Erase

Track System: Automatic Reverse 2 Track System

Monitor System: Sound Monitor

Tape Speeds: 3-3/4 ips. and 1-7/8 ips. Frequency Response:  $120\sim8,000 \text{ c/s}$  at 3-3/4 ips.  $120\sim5,000 \text{ c/s}$  at 1-7/8 ips.

120~3,000 C/S at .

Input Impedance: Microphone  $8 \ K\Omega$ 

Auxiliary 80 KΩ AC. Adaptor 9V

Output Impedance: Extension Speaker Jack "EXT.SP" 8  $\Omega$  Playing Time: 1 hour at 3-3/4 ips. with 5″ Tape (600 ft)

2 hours at 1-7/8 ips. with  $5^{\prime\prime}$  Tape  $(600\,ft)$ 

Battery Life: More than 15 hours (using NATIONAL "Hi-Top" Batteries)

Recording Level Indicator: VU. Meter

 $\begin{array}{lll} \mbox{Built-in Speaker:} & 6'' \times 3 \text{-} 1/4'' \mbox{ Dynamic Speaker} \\ \mbox{Dimensions:} & 11 \text{-} 3/4''(\mbox{W}) \times 13''(\mbox{D}) \times 3 \text{-} 3/8''(\mbox{H}) \\ \mbox{Weight:} & \mbox{About 10 lbs. without Batteries} \end{array}$ 

#### PARTS LOCATION

- ① Case Lid
- 2 Left Reel Table
- 3 Head Cover
- 4 Volume Control Knob
- ⑤ Tone Control Knob
- 6 Voice Operation Switch
- ① Level Indicator
- "CUE" (Instant Stop) Button
- Rewind Push Button
- 10 Stop Push Button
- 1 Fast Forward Push Button
- Play Push Button
- (3) Record Push Button
- (4) Right Reel Table
- (5) Capstan Sleeve Rest
- 16 Tape Countor
- (17) Reverse Push Button

- Auxiliary Input Jack
- (9) Microphone and Remote Control Jack
- 20 AC. Adaptor Jack
- 2) Sound Monitor Switch
- 2 Earphone and EXT. SP. Jack

#### **BLOCK DIAGRAM OF ELECTRICAL CIRCUITS**

#### RECORDING CIRCUIT

#### PLAYBACK CIRCUIT

### **DISASSEMBLY INSTRUCTIONS**

#### **BOTTOM COVER**

- 1. Turn over the Main Cabinet Body.
- 2. Remove 5 screws (A) holding Bottom Cover.
- 3. Pull out Speaker lead wires.

#### MAIN CABINET BODY CASE

- 1. Remove Head Cover.
- 2. Remove screw (B) under the Head Cover.
- 3. Remove Bottom Cover. (Refer to Bottom Cover)

4. Remove 5 Chassis Mounting Screws (C) and (D).

#### **FLYWHEEL**

- 1. Remove Capstan Sleeve (E) from Capstan.
- Unscrew and remove screws (F) from the Upper Baseplate, and remove Baseplate.
- Unscrew and remove screw (G) from the Slide Switch Rod and move the Rod toward the Reel Table.
- Carefully remove the Flywheel. In this instance, care must be taken not lose the Thrust Steel Ball put in the Flywheel Shaft Bearing.

#### **MOTOR**

- 1. Loosen screw (H) and remove Motor Pulley.
- 2. Unscrew and remove screws (1) and remove Motor.

#### MECHANICAL OPERATING CONTROLS

#### **OPERATION**

- 1. Set to required speed by inserting Capstan Sleeve or removing it from Capstan.
- 2. When "PLAY" Push Button is pressed, the unit is set at "PLAY" mode.
- 3. When "PLAY" and "RECORD" Push Buttons are pressed simultaneously, the unit is set at "RECORD" mode.
- 4. When "REWIND" Push Button is pressed, the tape just recorded or played back is rewound rapidly.
- 5. When "FAST FORWARD" Push Button is pressed, the tape is advanced rapidly.
- 6. When "CUE" Push Button is pressed, the tape motion stops instally for cueing and editing purposes.
- 7. When "REVERSE" Push Button is pressed together with the "PLAY" Push Button, or while the tape is moving in normal forward direction, the tape moves in reverse direction, or the tape direction reverses instantly.

#### TAPE TRANSPORT CONTROL FUNCTIONS

- 1. The Buttons are released automatically, when the other Buttons are pressed, except "CUE" Push Button.
- 2. The "CUE" Push Button is inoperative when unit is set at "FAST FORWARD" or "REWIND" mode.

#### TAPE TRANSPORT OPERATION

#### PLAYBACK AND RECORD

When "PLAY" Push Button is depressed, Pressure Roller is pressed against Capstan and the left side Pressure Pad assembly is pressed against Haed. At the same time, Idler Wheel-B contacts Idler Wheel-A, Right Reel Table and Pulley simultaneously causing Right Reel Table to rotate.

When "PLAY" and "RECORD" Push Buttons are depressed simultaneously, the unit is in the "RECORD" mode, with the mechanism set in the same manner as in the "PLAY" mode.

#### **FAST FORWARD**

When "Fast Forward" Push Button is depressed, Fast Forward Roller contacts against Idler Wheel-A. At the same time, Idler Wheel-B contacts against Right Reel Table, Idler Wheel-A and Right Reel Pulley simultaneously causing Right Reel Table to rotate rapidly.

#### REWIND

When "REWIND" Push Button is depressed, Fast Forward Roller contacts against Idler Wheel-A and Idler Wheel-B contacts against Left Reel Table causing Left Reel Table to rotate rapidly.

When "STOP" Push Button is depressed, previously engaged Push Button is instantly released. Brakes will stop both Reel Tables and power supply to the unit is cut-off.

#### **REVERSE**

When "REVERSE" Push Button is pressed or the Auto-Reverse Mechanism is activated by means of contact of the metal sensing foil attached to the tape against tape guide post while unit is in "RECORD" or "PLAY" mode of normal forward direction, Idler Wheel-B contacts against Left Reel Table and Idler Wheel-A. Simultaneously, right side pressure Pad assembly Presses against Head.

#### **MECHANICAL ADJUSTMENTS**

#### PRESSURE ROLLER TENSION

- Shaft of Pressure Roller must be parallel to shaft of Capstan.
- Pressure between Capstan and Pressure Roller can be checked as follows:
  - a. Set the recorder in PLAY mode with speed set at 1-7/8 ips.
  - Hook a loop of thread at Pressure Roller Shaft and Spring Scale and pull until Pressure Roller is disengaged from Capstan.
  - c. The proper pressure is between  $7 \sim 12.4$  ozs.  $(200 \sim 350 \text{ g})$ .
  - d. If pressure is not within the above range, adjust Pressure Roller Spring.

#### **IDLER TENSION**

- Shaft of Idler Wheel-B must be parallel to shafts of Idler Wheel-A and Reel Table Pulley.
- Pressure between Idler Wheel-B and Idler Wheel-A and Reel Table Pulley can be checked as follows:
  - a. Set the recorder in PLAY mode.
  - Hook a loop of thread as follows and pull until Idler is disengaged from the Idler Wheel-A (conduct for both Idler Wheels).
  - c. The proper pressure is between 1.4  $\sim$  2.5 ozs. (40  $\sim$  70 g).

#### WINDING TORQUE

- Place a 5 inch tape reel on either the right or left reel table and hang the end of the tape on a Tension Gauge.
- 2. Proper tensions are as follows:
  - a. PLAY mode......more than 0.176 ozs. (5 g) b. REWIND mode ......more than 0.53 ozs. (15 g)
  - c. F.F. mode ......more than 0.53 ozs. (15 g)
- 3. If tension is less than the above figures, adjust Idler Wheel-A spring for PLAY tension and F.F. spring for F.F. and REWIND tensions.

#### PRESSURE PAD PRESSURE

- 1. Set the unit in PLAY mode.
- 2. Place a tention gauge at the center of tape pad.
- 3. Gradually draw the pad from the head until pad is disengaged from head and read the scale.
- 4. Proper pressure should be  $1.05 \sim 1.60$  ozs. (30  $\sim$  45 g).
- 5. If tension is not within the above range, adjust pad spring.

#### AMPLIFIER ADJUSTMENTS

# RECORD/PLAYBACK HEAD AZIMUTH ADJUSTMENT

Instruments Required: V.T.V.M. Standard Alignment

Tape,  $8 \Omega$  Resistor.

Measuring Circuit: Refer to Fig. 1.

#### Measuring Method:

- 1. As shown in Fig. 1, connect V.T.V.M. to Extension Speaker Jack of model RQ-158S and terminate with 8  $\Omega$  resistor.
- 2. Thread Standard Alignment Tape (azimuth adjustment part) and set recorder to PLAYBACK mode.
- Turn head adjustment screw for maximum reading at V.T.V.M.
- After completion of above adjustment, lock screw with paint.
- Adjust levels of heads (in relation to Erase Head) as in Fig. 2. For quick check, lift pressure pad assemblies with fingers and note position of tape in relation to heads.

Fig. 2

NOTE: A. The levels of heads are to be adjusted by spacer-B, so place the proper number of spacers according to the color code indicated on the head.

Color code on the headNo. of spacers requiredRed2 pcs.None1 pc.BlackNil

B. Care must be taken in mounting the head assembly for the reverse operation. The erase record and playback slits on the "reverse head assembly are located in reverse positions"

- in comparison to the head assembly for "regular" direction Operation.
- C. Care must also be taken in checking the pressure pad contact to the head. The pad must be pressed against head correctly (vertically to the head and in parallel to the tape) and also there should not be any difference in tape motion whether the pad is in contact or not, both for normal and reverse operations.

#### RECORD BIAS FREQUENCY ADJUSTMENT

Instruments Required: Oscilloscope, AF Oscillator, 100  $\Omega$ 

Resistor.

Measuring Circuit: Refer to Fig. 3.

Fig. 3

#### Measuring Method:

- 1. As shown in Fig. 3, insert a  $100\,\Omega$  resistor to ground lead wire of Record Head and connect vertical axis of Oscilloscope across resistor; connect horizontal axis of Oscilloscope to output terminl of AF Oscillator.
- 2. When model RQ-158S is set to RECORD mode, connected as above and volume control (VR-2) set at minimum and VR-4 (semi-fixed variable resistor for bias current adjustment) set at center pesitions, Lissajous' figure will appear on the Oscilloscope; refer to this figure to check frequency of bias oscillator. Standard frequency is 30~40 KC.
- If frequency is not within above range, adjust core of T4 (Bias Oscillator Coil) until above frequency is obtained.

**NOTE:** The above adjustment must be made for both "normal" and "reverse" operation heads. Also, lock cores with paint after adjustments.

#### RECORD BIAS CURRENT ADJUSTMENT

Instruments Required: V.T.V.M. 100  $\Omega$  Resistor. Measuring Circuit: Refer to Fig. 4

#### Measuring Method:

- 1. As shown in Fig. 4, insert  $100~\Omega$  resistor to ground lead wire of Record Head and connect VTVM across resistor.
- When recorder is set to RECORD mode with volume control set at minimum, BIAS (to be fed to Record Head) will be indicated at V.T.V.M.
- 3. As standard bias current for model RQ-158S is set between 0.6 and 0.8 mA, VTVM reading should be between 60 and 80 mV  $(0.6\sim0.8\,\text{mA}\times10^3\times100\,\Omega)$  =  $60\sim80\,\text{mV}$ . If out of range, adjust VR-4.

NOTE: The above adjustment must be made for both "normal" and "reverse" operation heads. Record/ Playback and Erase heads are connected to assure correct phase relationships, so do not reverse connections to any of the heads, as this will result in an increase in noise and distortion.

#### **ERASE CURRENT ADJUSTMENT**

Instruments Required: DC Milliammeter (having range

of  $0\sim20$  mA or 50 mA).

Measuring Circuit: Refer to Fig. 5

Fig. 5

#### Measuring Method:

- 1. Disconnect wiring from ground side of erase head and insert DC Milliammeter between wire and terminal as shown in Fig. 5.
- When recorder is set to RECROD mode, with volume control (VR-2) set at minimum position, DC Milliammeter will indicate erase current.
- 3. Standard erase current is between  $7{\sim}11\,\text{mA}$ . If current measured is not within above range replace R-31 resistor (Lower resistance value if current is low and vice versa).

NOTE: DC Milliammeter must be accurate. If "DC Current Range" of regular "VOM" is used, it should be calibrated for accurate reading.

#### RECORD LEVEL ADJUSTMENT

Instrument Required: AF Oscillator, Attenuator, VTVM,

600  $\Omega$  and 100  $\Omega$  Resistors.

Measuring Circuit: Refer to Fig. 6.

Fig. 6

#### Measuring Method:

- Set Monitor Switch (S3) at "OFF". In order to cutoff bias current from oscillator circuit, insert a paper between the contacts of Bias Cut-off Switch (S10).
- 2. As shown in Fig. 6, connect output of AF Oscillator to Microphone Input Jack of model RQ-158S through Attenuator (terminate with 600  $\Omega$  if impedance of attenuator is 600  $\Omega$ ). Disconnect wiring from ground side of Record Head; insert 100  $\Omega$  resistor between lead wire and terminal; connect V.T.V.M. across resistor.
- Set recorder to RECORD mode, with volume control set at maximum and VR-3 (semi-fixed variable resistor for level adjustment) at center positions.
- 4. Set AF Oscillator output for 1 Kc, adjust attenuator to obtain 50 mV reading at V.T.V.M. Attenuation level at this setting should be  $-69 \sim -75$  db.
- If attenuation level is not within above range, replace R-10 (Lower resistance value if current is low and vice versa).
- 6. Also confirm that the Level Meter setting at this moment is  $-3\sim3$  db.
- If setting is not within above range, replace R-37 (Lower resistance value if setting is low and vice versa).

**NOTE:** The above adjustment must be made for both "normal" and "reverse" operation heads.

# OVERALL LEVEL BALANCE (between normal and reverse operations) ADJUSTMENT

Instruments Required: AF Oscillator, Attenuator, V.T.T.M.

600  $\Omega$  and 8  $\Omega$  Resistors.

Measuring Circuit: Refer to Fig. 7

Fig. 7

#### Measuring Method:

 As shown in Fig. 7, connect output of AF Oscillator to Microphone Input Jack of model RQ-158S through

- Attenuator (terminate with 600  $\Omega$  if impedance of attenuator is 600  $\Omega$ ).
- 2. Connect V.T.V.M. to Extenion Speaker Jack of model RQ-158S and terminate with 8  $\Omega$  resistor.
- 3. Set the recorder to RECORD mode with tone and volume controls set at maximum positions.
- 4. Set AF Oscillator output for 1 Kc, adjust attenuator to obtain O-VU reading at Level Meter and continue attenuation to further attenuate 15 db. Record signals in normal and reverse motions.
- Playback tape. If the difference of VU meter readings between "normal" and "reverse" forward recording is more than 6 db, adjust VR-3 (semi-fixed variable resistor for level adjustment).

**NOTE:** The VR-3 is also related to the RECORD LEVEL, so adjust levels in relation to the others.

#### **VOICE OPERATION SENSITIVITY ADJUSTMENT**

Instruments Required: AF Oscillator Attenuator, V.T.V.M.

600  $\Omega$  and 8  $\Omega$  Resistors.

Measuring Circuit: Refer to Fig. 7

#### Measuring Method:

- 1. As shown in Fig. 7, connect output of AF Oscillator to Microphone Input Jack of model RQ-158S through Attenuator (terminate with 600  $\Omega$  if impedance of attenuator is 600  $\Omega$ ).
- 2. Connect VTVM to Extension Speaker Jack of model RQ-158S and terminate with  $8\Omega$  resistor.
- Set the recorder to RECORD mode with tone and volume controls set at maximum positions, monitor switch to "on", and voice control switch to "AUTO".
- Set AF Oscillator output for 1 Kc, adjust attenuator to obtain 0.3 V reading at V.T.V.M.
- First, turn VR-6 (semi-fixed variable resistor for voice control sensitivity adjustment) to maximum (extreme clockwise position) and gradually rotate it to counterclockwise direction and stop rotation as soon as the motor JUST starts rotation.
- If the motor does not start rotation with 0.3 V output, confirm whether the motor starts rotation with the signal 7 db below O-VU on the Level Meter with VR-6 set at minimum (extreme counter-clockwise position).
- 7. If the motor still does not start rotation with the above setting, check voice operation control circuit referring the Trouble Shooting Guide.

#### REPLACEMENT PARTS LIST

ATTENTION: Please order Replacement Parts according to this Replacement Parts List. The Parts which are not listed up here will not be supplied.

So a Part in an assembly has to be ordered as a whole assembly.

#### MALFUNCTIONS IN RECORD/PLAYBACK MOTION

#### DEFECTIVE RECORDING CIRCUIT

#### DEFECTIVE PLAYBACK CIRCUIT

DEFECTIVE VOICE OPERATION CIRCUIT

## **EXPLODED VIEWS**

138

882888

## **EXPLANATIONS ON CIRCUITS**

#### 1. RECORDING AMPLIFIER CIRCUIT

#### 2. PLAYBACK AMPLIFIER CIRCUIT

#### 3. REVERSE CIRCUIT

NOTE:

S2-1~S2-6......Head selector switch (shown in normal reverse

S2-1~S2-6......Head selector switch (showing horizon)
S4-1......Plunger power switch

1. S4-1 turns "ON" when the recorder is set for PLAY or RECORD mode only, therefore the "Reverse Button" and the "Sensing Pole" are operative only when the recorder is set for "PLAY" or "RECORD" mode.

2. If the "Reverse Button" is "ON" or the "Sensing Pole" is short circuited by means of a sensing tape attached on the tape, the plunger is activated thus sets the slide switch (S2) to "Reverse" position causing the tape to move in reverse direction.

#### 4. VOICE OPERATION CIRCUIT

NOTE:	
Tr7, Tr8,	Tr93-stage DC amplifier transistors
VR6	Voice operation sensitivity control
R32, C21	Delay circuit

S8 .	AUTO/MANUAL Selector Switch
S9 .	Relay contacts
SM2	Temperature compensation thermistor

#### NOTE:

- 1. S1 ....... Record/Playback Selector Switch (shown in playback position) 2. S2 ....... Head Selector Switch (shown in normal forward position)
- 3. S3 ...... Monitor Selector Switch
- 4. S4-1 ..... Plunger Power Switch
- 5. S4-2 ..... Stop Switch ("OFF" when in F.F. and Rewind modes)
- 6. S5 ...... Power Switch
- 7. S6 ...... Instant Stop Switch
- 8. S7 ....... Remote Cut-off Switch ("ON" when in F.F. and Rewind modes)
- 9. S8 ...... Voice Operation (AUTO/MANUAL) Selector Switch
- 10. S9 ...... Relay contacts
- 11. S10 ...... Leaf Switch ("ON" when in PLAY and Record modes) 12. All resistance in  $\Omega$ , 1/4W unless otherwise indicated.  $K=1,000\Omega$   $M=1,000,000\Omega$
- 13. All capacitance in  $\mu$ F, unless otherwise indicated.  $P = \mu \mu$ F
- 14. Values indicated in \_\_\_ are DC to chassis ground with no signal applied.

  15. The upper values should be measured during playback and the lower values during recording.
